# Homework Week 5

MATHEMATICS OF DEEP LEARNING
MASH & IASD 2026

**Lecturer:** Bruno Loureiro, bruno.loureiro@di.ens.fr

**Instructions:** This homework is **due on Monday 02/03/2026**. Please upload your solutions in a PDF file named HW5_NOM_PRENOM.PDF here. Formats accepted: PDF (LaTeX or a **readable** scan of handwritten solutions).

**Packages allowed: Numpy and Matplotlib. Notebooks with running errors will not be considered.**

## 1 Exercises

**Exercise 1.**

Reproduce Figure 1 from the lecture notes. Your notebook must show both the histogram of the empirical spectral density and the analytical curve of the semi-circle law discussed during the lectures.

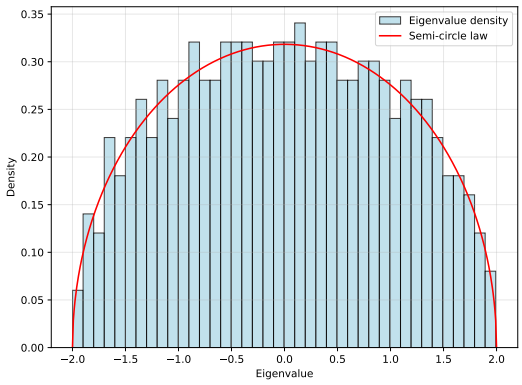

Figure 1: Histogram of eigenvalues of a GOE matrix of dimension $d = 500$ with 40 bins. The red solid curve denotes de Wigner semi-circle law $\mu(\mathrm{d}x) = \frac{\sqrt{4-x^2}}{2\pi}\mathbf{1}_{[-2,2]}\mathrm{d}x$.

**Exercise 2.**

Reproduce Figures 2 (left) and 2 (right) from the lecture notes. Your notebook must show both the histogram of the empirical spectral density and the analytical curve of the Marchenko Pastur law discussed during the lectures.

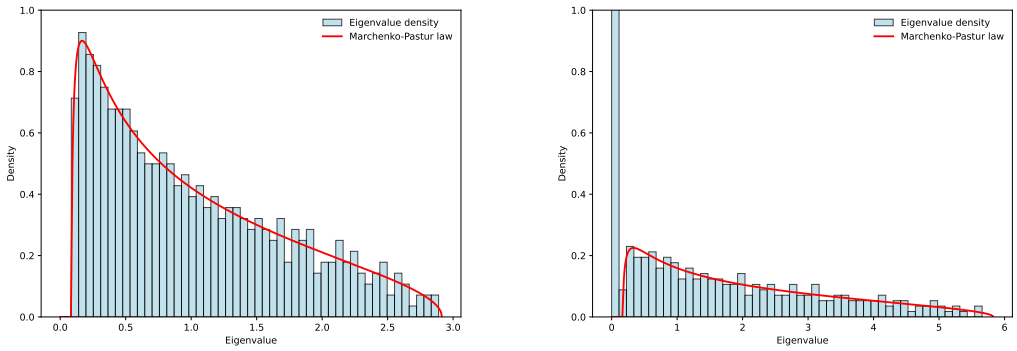

Figure 2: Histogram of eigenvalues of a Wishart matrix of dimension $d = 500$ with 40 bins for $\gamma = 0.5$ (**left**) and $\gamma = 2$ (**right**). The red solid curve denotes de Marchenko-Pastur law given by $\mu_{\mathrm{mp}}(\mathrm{d}x) = \left(1 - \frac{1}{\gamma}\right)_+ \delta_0 + \frac{\sqrt{(\gamma_+ - x)(x - \gamma_-)}}{2\pi\gamma x} \mathbf{1}_{[\gamma_-, \gamma_+]}(x)\mathrm{d}x0.$
